SUSHRUTH DANIVASA SRIDHAR

Phone: +1 (414)-629-3242| Email: dssushruth2000@gmail.com| LinkedIn | GitHub

EDUCATION

University of Wisconsin, Master's in Computer Science, Milwaukee, United States | GPA: 3.77 September 2023 - May 2025

SKILLS

Programming Languages: Python | JavaScript| C/C++|Java
Databases: MySQL | PostgreSQL | MongoDB
Cloud Platforms: Azure| AWS| Google Cloud
Version Control and Collaboration: Git | GitHub
Containerization and Deployment: CI/CD pipelines | Docker
Web Technologies: HTML5 | CSS3 | React| Django | Flask
Coursework: Machine Learning, Natural Language, Image Processing, Cloud Computing

Professional Experience

KPMG, Analyst August 2022 – July 2023 | Bengaluru, India

- Spearheaded the migration of **10+ applications** to **Azure**, ensuring scalability and reliability in **cloud infrastructures**, leveraging **Azure Databricks** for data processing tasks.
- Specialized in optimizing resource allocation, resulting in **15% improvement** in system performance while maintaining cost efficiency through the utilization of Databricks and **Azure services**.
- Actively collaborated with cross-functional teams to develop and implement strategic cloud solutions aligned with Azure's capabilities and business objectives, integrating **PostgreSQL** databases for data storage and management.

Wipro, Intern March 2022 – May 2022 | Bengaluru, India

- Engaged in a series of challenging assignments, significantly contributing to team objectives and demonstrating a strong capacity to tackle complex challenges.
- Strengthened my professional skill set and furthered my career development with practical, hands-on experience in a fast-paced work environment resulting in a **10% increase** in productivity and efficiency within the team.

Projects

Multiplayer Tic-Tac-Toe April 2024

- Constructed a web-based Tic-Tac-Toe game utilizing **HTML**, **CSS**, and **JavaScript**, enabling two players to dynamically interact with a 3x3 grid of "X" and "O" marks.
- Implemented interactive features such as displaying the current player's turn, announcing winners or draws, and providing a restart button to initiate new games. Additionally, integrated a modal popup to showcase game outcomes, significantly enhancing user interface functionality and player engagement.

Smart Metering System July 2022

- Engineered an IoT-based smart energy meter with **Arduino** and **Blynk IoT app** featuring advanced tracking technology to monitor real-time electricity usage and facilitate remote control functionalities which results in **20% reduction** in electricity consumption.
- Improved energy efficiency and sustainability by providing precise bill estimates and detailed insights into consumption patterns reducing billing **errors by 10%**.

ELIXIR March 2022

- Created ELIXIR, a specialized platform offering a wide selection of gaming accessories designed to meet the needs of gaming enthusiasts.
- Enhanced the shopping experience, driving a **30% increase** in user engagement, with a user-friendly interface developed using **Python**, **HTML**, **CSS**, and **Flask**. This resulted in intuitive navigation and personalized recommendations for gamers, consolidating ELIXIR's position as a premier destination for gaming-related purchases.

Online Examination System May 2020

- Modernized the examination process by using **MySQL**, enhancing the efficiency, security, and organization of storing and retrieving exam data resulting in a **50% reduction** in exam processing time and a 15% improvement in data accuracy.

Courses & Certifications

- Associate Cloud Engineer, Google — October 2022
- Architecting with Google Compute Engine, Google — April 2021
- Artificial intelligence, Verzeo — July 2021
- Build a Face Recognition Application using Python, Guvi — May 2021

Publications

Smart Metering System, IJRESM April 2022

- Published a paper detailing the development and implementation of a smart energy meter using IoT
