Education

University of Wisconsin-Milwaukee — September 2023 - May 2025
Master of Science, Computer Science, CGPA: 3.80/4 — *Milwaukee, Wisconsin*

Dayananda Sagar Academy of Technology and Management — August 2018 - July 2022
Bachelor of Engineering, Information Science, CGPA: 8.30/10 — *Bengaluru, India*

Skills

Languages: Python, Java, TypeScript, JavaScript, SQL
Frameworks & Technologies: FastAPI, Flask, REST APIs, React, Node.js, HTML, CSS
Databases: PostgreSQL, MongoDB, MySQL
Cloud & DevOps: Azure, AWS, GCP, Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD
Tools: Git, Linux, Bash, Postman
Certification: Azure Developer Associate (AZ-204)

Work Experience

Naviget — June 2025 - Present
Software Engineer — *Saratoga, California*

- Built backend RESTful APIs for user access control, workflow orchestration, and media processing using Python and FastAPI, ensuring reliable production operations with 95% uptime.
- Reduced API response latency by 35% by integrating Redis-backed task queues into the video rendering pipeline.
- Reduced media processing time by 30% by designing adaptive rendering rules based on input metadata, leveraging GitHub Copilot and Claude to streamline implementation.
- Partnered on automating 50+ API tests using Postman, JSON schemas, and GitHub Actions, catching critical schema violations and edge-case failures before production deployments.

KPMG — August 2022 - July 2023
Software Engineer — *Bengaluru, India*

- Developed backend APIs for a real-time financial analytics dashboard using Flask, PostgreSQL, and Node.js integration scripts, improving query efficiency by 48% across 10M+ records.
- Configured 10+ Jenkins CI/CD pipelines for financial reporting modules, automating build and deployment workflows to ensure zero-downtime during an AWS-to-Azure migration.
- Refactored a Python monolithic backend into 8+ scalable microservices, boosting API throughput by 20%.
- Integrated AI/ML classification models into Python APIs in collaboration with ML engineers, flagging irregular financial patterns and reducing manual investigation time by 50%.

WIPRO — March 2022 - May 2022
Software Engineer — *Bengaluru, India*

- Collaborated on redesigning the flight reservation and cancellation backend in Java and MongoDB, resolving a concurrency bottleneck that reduced booking errors by 20% during peak traffic.
- Restructured service-layer components using OOP principles and efficient data structures, improving code reuse, and reducing technical debt across backend modules.

Projects

DevConnect *Demo* | *FastAPI, PostgreSQL, React, Docker, Render*

- Created a full-stack developer collaboration platform with 20+ FastAPI REST endpoints, JWT/OAuth authentication, and a React + TypeScript frontend, streamlining code collaboration and workflow management.
- Integrated Google Generative AI model for real-time code review and instant feedback, containerized with Docker and deployed on Render.

ClassMate.AI *Demo* | *Python, Flask, Google API, Azure*

- Engineered a full-stack AI chatbot using Python, Flask, and Google Gemini API, supporting 950+ users through optimized prompt pipelines and efficient request handling.
- Deployed on Azure with HTML, CSS, and JavaScript, using async query handling for sub-second latency while maintaining 92% response accuracy.

Traffic Sign Recognition *GitHub* | *Python, TensorFlow, Pandas, OpenCV*

- Trained a machine learning model to achieve 98.5% test accuracy through cross-validation and hyperparameter tuning with Python, TensorFlow, Pandas, and OpenCV.
- Implemented preprocessing and checkpoint-based training on a 50K+ image dataset, improving training stability.
